Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-16 and 24-31 are rejected under 35 U.S.C. 102(b) as being anticipated by Zappella et al. US 6,297,069.

Zappella et al. discloses a method of forming an electronic device having a chamber including preparing an outer surface on a solidified bifunctional core material in a depression formed in a substrate, (see fig. 10) Zappella et al. states in steps 210-230 of applying a supporting material to a cavity of a substrate, and curing the material, thus preparing an outer surface. Next Zappella et al. discloses establishing a layer on the outer surface and a portion of the substrate surrounding the depression to define a chamber, in step 250, Zappella et al. deposit a layer of material on the support material and substrate thus forming a chamber, and changing the state of the support (core) material to a fluid and removing it from the chamber, and where the material can be a low melting point wax (see col. 12, lines 13-36).

Response to Arguments

Applicant's arguments filed 01 December 2006 have been fully considered but they are not persuasive. The examiner has tried to better point out how he believes the

reference reads on the claims as written and that the reference teaches using bifunctional materials in the cavities of MEMS device during their manufacture.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kevin M. Picardat whose telephone number is 571-272-1841. The examiner can normally be reached on Monday-Thursday 7:00-5:30.
